Understand the fee calculation	16	Glossary and status reference	31
Record money received	17	Alphabetical index	32

How to use the guide

New to the app? Read pages 3–12, then use the monthly routine on page 13. Returning users can use the alphabetical index. Screenshots are real app captures; visible sample names, dates, and balances will differ from your daily records.

01 · ACCESS

Open the app & sign in

Use the website address and account details supplied at handover.

Figure 1. The admin sign-in screen.

- 1 Open the studio website in your browser and go to **/admin**. Bookmark this address for daily use.
- 2 Enter your assigned **Email** and **Password**, then select **Sign in**. The Dashboard opens after a successful sign-in.
- 3 If the session is no longer valid, sign in again. If the account is inactive or the password is not accepted, contact your studio administrator or implementation team.
- 4 Select **Sign out** at the bottom of the sidebar when finished, especially on a shared computer.

Who is using the app?	Access
Studio owner	Daily operations and saving studio settings.
Authorized staff	Day-to-day administration; saving settings is restricted to the owner.
Parents / guardians	The public registration form at /register ; no admin account is needed.

Running the app day to day

Use the hosted website supplied to you. Your implementation team handles hosting, technical startup, account setup, and recovery. No installation or developer commands are needed for normal studio work.

02 · YOUR WORKSPACE

Read the Dashboard

Start here for a quick view of the current month.

Figure 2. Dashboard overview with tuition totals, student count, and charts.

What to check

- **Tuition due:** charges for the current month.
- **Collected:** payments against the current month's bills.
- **Outstanding:** balances still showing on those bills.
- **Active students** and **Unpaid / Partial bills** identify follow-up work.

How to navigate

- Use the left sidebar to open each module.
- Use **Toggle Sidebar** when you need more workspace.
- Check the notification bell for pending requests, unsent bills, or recent sending failures.
- Use the report links for Monthly, Yearly, or All-time financial views.

Compare the same period

Dashboard billing totals relate to the billed month. Financial Report measures cash received and spent by transaction date, so the two views may legitimately differ.

03 · SET UP PROGRAMS

Add and manage teachers

Create teachers before assigning them to classes.

Figure 3. Teachers list: contact information, linked class count, and status.

- 1 Choose **Teachers** in the sidebar, then open the add-teacher form.
- 2 Enter the teacher's name and available contact information. Add useful notes, then save.
- 3 Open a teacher from the list to view their details and associated classes. Use the edit action to correct information.
- 4 When creating or editing a class, select the teacher from the **Teacher** dropdown.

Track instructor costs

When recording an expense, choose the relevant teacher if appropriate. The teacher's detail page can then show payments recorded for that teacher. This records studio expenses; it does not run payroll.

03 · SET UP PROGRAMS

Manage the class catalogue

Keep schedules, teachers, and prices current.

Figure 4. Classes list with style, teacher, schedule, rate, and enrollment count.

- 1 Open **Classes** and search for an existing class before creating a new one.
- 2 Open a class to review its details, current enrollments, and roster. Use the edit action for changes.
- 3 Use the add-class action for a new program. Enter its schedule, teacher, and pricing details as shown on the next page.
- 4 Use **Enrollments** to connect students to the class. Creating a class alone does not enroll students.

Capacity is advisory

Capacity helps you see how full a class is. The enrollment form warns when it is full; the current app does not enforce a hard booking limit or maintain a waiting list.

03 · SET UP PROGRAMS

Choose the correct class pricing

The pricing type determines how the student is billed.

Figure 5. Add Class form with teacher, schedule, rate, pricing type, and capacity.

Field / choice	How to use it
Class Name, Dance Style, Level	Use a clear name that parents and staff will recognize.
Teacher, Day, Start / End Time	Select the instructor and enter the normal weekly schedule.
Regular (per session)	Standard Rate is the price of one session. Monthly charges use the billable sessions.
Seasonal (flat fee)	Standard Rate is a one-time program fee, charged once per enrollment.
Capacity	Optional advisory maximum; review warnings before enrolling.

One month versus every month

To correct a cancellation or extra session for a particular month, use **Class Fees**. To change the class's normal rate for future billing, edit the class. Seasonal charges do not receive multi-class or sibling discounts.

04 · PEOPLE

Create and maintain families

One family groups a parent's children and their fee notices.

Figure 6. Families list showing parent contact details and student counts.

- 1 Open **Families** and search first to avoid adding the same household twice.
- 2 Use the add-family action. Enter **Family Name**, **Parent/Guardian Name**, phone, and other available contact details, then save.
- 3 Open the family record to review its children and update contact information through the edit action.
- 4 When adding a sibling, select the **same Family** on the student form.

Why family matching matters

Sibling billing and combined parent messages use the family record. A shared surname is not enough. Registration approval matches parent phone or email; conflicting matches require review before approval.

04 · PEOPLE

Add and update students

Keep each student's family, contact, and class information together.

Figure 7. Students list with family, active classes, and status.

- 1 Open **Students** and search for the student first.
- 2 Choose the add-student action. Enter **Student Name** and select the correct **Family**.
- 3 Add date of birth, gender, relevant medical/allergy notes, general notes, and emergency contact details as available. Select **Create Student**.
- 4 Open the student's record to review details and use its edit action for corrections.
- 5 Add the student's class through **Enrollments**. Creating or importing a student alone does not assign a class.

Bringing in an existing roster?

Use **Import CSV** for bulk student creation. See [Import and export spreadsheets](#) for the template, matching rules, and limitations.

05 · PARENT REGISTRATION

Share the registration form

Parents submit a request; staff review it before enrollment.

The screenshot shows a web form titled "Malhaar Dance Company Registration" with the subtitle "Tell us about your dancer and we'll get them enrolled." The form is divided into several sections: "Parent / Guardian" with fields for "Full Name" (e.g., Anu Sharma), "Email" (anu@example.com), and "Phone" (+1); "Student" with fields for "Student Full Name" (e.g., Nia Sharma), "Date of Birth" (mm/dd/yyyy), "Gender" (Select...), and "Requested Class" (Select a class...); "Previous Dance Experience" with a text area for optional information; and "Emergency Contact" with fields for "Contact Name" (e.g., Priya Sharma), "Relationship" (e.g., Grandmother), and "Emergency Phone" (+1). At the bottom, there are two checkboxes: "I agree to the studio's policies and procedures." and "I consent to my child being photographed/recorded for studio use (e.g., social media, promotional materials)." A red "Submit Registration" button is at the bottom.

Figure 8. Public registration form.

- 1 Share the studio website's **/register** address with the parent. Staff can also open **Enrollment Form** from Enrollments.
- 2 Ask the parent to complete their name, email, and phone; the student's information; and the requested class.
- 3 Complete the emergency contact information and review the studio policy and photo/video consent choices.
- 4 Select **Submit Registration** and wait for the confirmation screen.
- 5 Staff review the request under **Registration Requests**. Submission alone does not mean the student has been enrolled.

Returning families

Ask parents to use the same parent contact details for siblings. This helps the app identify their existing family.

Email confirmation

A registration acknowledgement can be emailed when email sending is configured. The on-screen submission confirmation remains the immediate result.

05 · PARENT REGISTRATION

Review and process requests

Verify the matching preview before approving.

Review Registration

Confirm the details before creating/matching family, student, and enrollment records.

Parent / Guardian	
Name	Wei Chen
Email	wei.chen@example.com
Phone	5557890123

Student	
Name	Lily Chen
DOB	9/8/2018
Gender	FEMALE
Requested Class	Bollywood Fusion
Previous Experience	One year of ballet

Emergency Contact	
Name	Wei Chen
Relationship	Father
Phone	5557890123

Consent	
Studio Policy Agreement	Agreed
Photo/Video Consent	Consented

On approval:

Family — create new "Chen Family"

Student — create new student

CancelRejectApprove & Process

Figure 9. Registration review and family/student matching preview.

- 1 Open **Registration Requests**. The **Pending** tab shows requests awaiting review.
- 2 Select **Review**. Check the parent, student, requested class, emergency contact, and consent details.
- 3 Read **On approval**: it explains whether the app will match an existing family/student or create a new one.
- 4 If the details and match are correct, select **Approve & Process**. The app creates or reuses the family and student and creates or reuses the class enrollment.
- 5 Use **Processed** to review completed requests. Use **Reject** only after reviewing an unsuitable or duplicate request; rejected items appear under **Rejected**.

Unexpected match?

Cancel the review and check the existing family contacts before proceeding. Conflicting phone/email matches are blocked. Ask the parent or implementation team to help resolve details that cannot be corrected in the current screen.

06 · ENROLLMENT

Enroll a student in a class

Enrollments connect students to the programs they attend.

The screenshot displays the 'Enrollments' page in the Malhaar Dance Company system. The left sidebar lists various navigation options: Overview, Dashboard, People (Families, Students), Programs (Teachers, Classes), Enrollments (selected), Registration Requests, Finance (Billing, Class Fees, Payments, Expenses, Other Income, Financial Report), and System (Notifications, Settings). The main content area is titled 'Enrollments' and includes a sub-header 'Manage student class enrollments.' Below this is a table of all enrollments. The table has columns for Student, Class, Schedule, Start Date, Status, and Actions. Each row represents a student's enrollment in a specific class, with details on the schedule and start date. The status is marked as 'ACTIVE' for all listed enrollments, and there is an 'End' button in the Actions column for each row. The top right of the page shows the user is 'Studio Owner' and provides links to 'Enrollment Form' and 'Add Enrollment'.

Student	Class	Schedule	Start Date	Status	Actions
Kiera O'Brien	Summer Intensive Workshop		8/29/2026	ACTIVE	End
Zara Khan	Bharatanatyam Beginner	MONDAY at 16:00	8/19/2026	ACTIVE	End
Arjun Gupta	Bollywood Fusion	SATURDAY at 10:00	8/9/2026	ACTIVE	End
Lela Sharma	Bharatanatyam Beginner	MONDAY at 16:00	7/25/2026	ACTIVE	End
Nia Sharma	Bharatanatyam Beginner	MONDAY at 16:00	7/10/2026	ACTIVE	End
Nia Sharma	Kathak Beginner	TUESDAY at 17:00	7/10/2026	ACTIVE	End
Diya Gupta	Kathak Beginner	TUESDAY at 17:00	6/30/2026	ACTIVE	End
Meera Nair	Kathak Intermediate	THURSDAY at 17:00	6/10/2026	ACTIVE	End
Aarav Patel	Bollywood Fusion	SATURDAY at 10:00	5/11/2026	ACTIVE	End
Aarav Patel	Bharatanatyam Intermediate	WEDNESDAY at 16:00	5/11/2026	ACTIVE	End

Figure 10. Enrollments list with class, schedule, start date, and status.

- 1 Choose **Enrollments** → **Add Enrollment**.
- 2 Select the **Student** and **Class**. Check any capacity warning, then select **Create Enrollment**.
- 3 Confirm the new enrollment appears with the correct student and class. Review the displayed start date because enrollment dates affect billing.
- 4 When a student stops a class, select **End** on that enrollment and confirm **End Enrollment** only after checking the student and class.

Dates and duplicate enrollments

The current add form selects a student and class; it does not offer a backdated start-date field. Ask your implementation team about historical corrections. The app prevents duplicate active enrollment in the same class, and ending an enrollment preserves its historical billing relevance.

07 · MONTHLY BILLING

Your monthly billing routine

Follow this order before sending fees to parents.

01

Confirm enrollments

02

Generate bills

03

Review class fees

04

Recalculate & verify

05

Finalize fees

06

Notify & collect

- 1 Check active students, family groupings, and class enrollments. Resolve start/end-date issues before billing.
- 2 Open **Billing**, select the intended month, and choose **Generate Bills for [month]**. This also creates the month's class-fee rows.
- 3 Open **Class Fees** for the same month. Review sessions, rates, flat fees, and the monthly total. Save any necessary overrides.
- 4 Return to affected bills and **Recalculate** those with no payments, or regenerate the month to update eligible unpaid records. Check discounts and adjustments.
- 5 Return to **Class Fees** and select **Finalize** for each reviewed row, or **Finalize All for [month]**. Recheck the bill totals before sending.
- 6 Send the combined family notice. As payments arrive, record each amount against the correct student's bill.

Do not skip the review

Fee finalization confirms that the class-fee rows have been reviewed; it does not recalculate existing bills. Bills with recorded payments cannot be recalculated. Use a documented adjustment to correct those bills.

Scheduled work

Automatic bill generation and email reminders depend on the deployment configuration. Confirm activation with your implementation team. Continue checking the month manually rather than assuming a scheduled job succeeded.

07 · MONTHLY BILLING

Generate and find monthly bills

Choose the month first, then use the status and search filters.

Figure 11. Billing workspace before any bills have been generated for the selected month.

- 1 Select the billing month beside **Generate Bills for [month]**, then generate if bills have not yet been prepared.
- 2 Read the result: created, updated, and skipped. Bills with recorded payments are skipped during regeneration.
- 3 Use the **UNPAID**, **PARTIAL**, **PAID**, and **OVERPAID** buttons to show or hide each status. Paid bills are hidden by default.
- 4 Search by student or family. Expand a family to see its student bill rows; select a student bill to inspect the calculation.

Totals and export follow the filters

The Billing summary cards and **Export CSV** reflect the bills matching the current month, search, and status choices. Enable all statuses and clear search when you need the whole month.

An empty list can mean no bills have been generated, the selected month is wrong, or filters exclude all records.

07 · MONTHLY BILLING

Review and finalize class fees

Use month-specific overrides for cancellations or extra sessions.

Figure 12. Class Monthly Fees before generation creates this month's fee rows.

- 1 Open **Class Fees** and choose the same month used in Billing. Fee rows appear after monthly bills are first generated.
- 2 Select **Edit** on a class. Review **Billable Sessions**, **Rate (\$)**, **Flat Fee (\$)**, and **Monthly Class Fee (\$)**.
- 3 Enter the correct monthly total as well as the supporting session/rate values. Add a useful note and select **Save Override**.
- 4 Recalculate affected bills that have no payments and verify the totals. Then finalize the reviewed fee rows.

Finalization has a scope

Editing a fee clears its finalized status. Parent fee notices and reminders are blocked until all contributing class fees are finalized. **Finalize All** applies to the selected month, including rows hidden by the class filter.

07 · MONTHLY BILLING

Understand the fee calculation

Illustrative examples in USD; use the studio's saved discount policy.

A student's bill combines class charges, eligible discounts, and any one-month adjustment. The sibling discount is calculated after the multi-class discount. Seasonal and other ineligible charges are added without either discount.

Example: two eligible classes + a qualifying sibling	Amount
Regular class A: 4 sessions × \$20	\$80.00
Regular class B: 4 sessions × \$25	\$100.00
Eligible tuition subtotal	\$180.00
Multi-class discount at 5%	−\$9.00
Subtotal after multi-class discount	\$171.00
Sibling discount at 5% of \$171	−\$8.55
Final amount due before adjustments	\$162.45
Optional seasonal program, not discount eligible	+\$150.00
Total including the seasonal program	\$312.45

Multi-class and siblings

At least two discount-eligible class charges qualify for the multi-class discount. Siblings must share one family; at least two active students in that family must have enrollment overlapping the billed month.

Partial months and seasonal fees

Regular fees are prorated to the student's enrolled dates and scheduled sessions. A seasonal flat fee is charged once per enrollment, not again every month. Check individual bill details for the actual calculation.

Balance

Balance = final amount due – net amount paid. For a \$162.45 bill with a \$100 payment, the remaining balance is \$62.45. A negative balance represents a credit/overpayment.

08 · PAYMENTS

Record money received

Record a payment only after the money has actually arrived.

Figure 13. Payments ledger before payments have been recorded.

- 1 Open **Billing**, choose the month, expand the family, and find the student's bill. Select **Record Payment**.
- 2 Check the student, billed month, and balance. Enter the amount received and the actual payment date.
- 3 Choose the method: **Zelle**, **Cash**, **Check**, or **Other**. Record the reference or notes where available, then save.
- 4 Verify the bill's paid amount, balance, and status. Open **Payments** to find the transaction using its date and method filters.

One transfer covering siblings

Allocate the transfer across the relevant student bills. For example, a \$180 transfer covering \$100 for one child and \$80 for another requires two payment entries. Do not record the full \$180 against both bills.

Recording is not collecting

This app records payments; selecting a method does not charge a card, withdraw funds, or initiate a Zelle transfer.

08 · PAYMENTS

Correct charges and record refunds

An adjustment changes what is owed; a refund records money returned.

Make a one-month adjustment

- 1 Find the bill in **Billing** and select **Adjust**.
- 2 Enter **Adjustment (\$)**: positive adds a charge; negative reduces it. Write a clear **Note**.
- 3 Select **Save Adjustment**, then review the final amount due and balance. This field is the bill's adjustment total: editing it replaces the previous adjustment amount.

Return an overpayment

- 1 Confirm the credit balance. If reducing a previously paid fee, first save the appropriate negative adjustment.
- 2 Return the money using the agreed payment method outside the app.
- 3 Select **Record Refund** on the overpaid bill. Enter the amount returned, return date, method, and reason; save and verify the remaining balance.

Worked example	Result
A \$100 bill has been paid in full	Paid \$100; balance \$0
Save a -\$20 adjustment	Due \$80; paid \$100; credit \$20; OVERPAID
Return and record a \$20 refund	Due \$80; net paid \$80; balance \$0; PAID

Keep the cash record correct

Refunds cannot exceed the collected overpayment. Do not also enter a refund as an expense: the refund already reduces tuition income on its return date. A bill with any recorded payments cannot be recalculated; use an adjustment for a fee correction.

09 · PARENT COMMUNICATION

Send a family fee notice

Review the combined message and recipient before sending.

Open the family message

From **Billing**, use the family's notification action, or open a pending family notification from **Notifications**. The **Send Notification** window shows the family contacts and a preview of the fee message.

- 1 Confirm the selected month, family, contact details, and the fees for each child.
- 2 If a finalization warning appears, review and finalize the named class fees first. Confirm that affected bills have also been recalculated where needed.
- 3 Choose the sending method below and check the result before closing the window.

Action	What it does
Copy Message	Copies the preview for manual sending.
Open in WhatsApp	Opens the wa.me link with the message prepared. Review the recipient and message, then press Send in WhatsApp.
Send Email	Sends through the configured studio email service; shown when the family has an email address.
Mark as Sent	Records a manually sent notice. It does not send a message by itself.
Send Payment Reminder	Sends an email reminder for eligible overdue, unpaid/partial bills, using the remaining balance.

Manual sending sequence

Finalize and review the bills → copy/open the message → send it to the parent → return to the app and mark it sent. Do not mark a message sent if the external send failed.

Check the WhatsApp conversation

Opening the wa.me link prepares the message; you must press Send in WhatsApp. Check the conversation to confirm it was sent, then return to the app and select Mark as Sent.

09 · PARENT COMMUNICATION

Review notifications and reminders

Use the log to check what happened after a send attempt.

Figure 14. Notifications page with the selected month, pending notices, and notification log.

- 1 Open **Notifications** and select the relevant month under **Pending for**.
- 2 Review pending family notices and open a message when ready to send.
- 3 Check the **Notification Log** for send attempts and failures. Review family contact details and service configuration when a send fails.
- 4 For overdue balances, use **Send Payment Reminder** in the family message window when a manual follow-up is appropriate.

Scheduled reminders

When email scheduling is active, email reminders use the due-day and reminder-delay settings, and target unpaid or partially paid bills. Successful scheduled reminders are sent once per bill; failed attempts can remain eligible for retry. Unfinalized class fees prevent sending.

No pending notices can mean that there are no bills for the month or that the existing bills have already been marked notified. Check Billing if you expected to see more families.

10 · STUDIO FINANCES

Record studio expenses

Capture what the studio spent and when it was paid.

Figure 15. Expenses list with category, teacher, amount, and payment method.

- 1 Open **Expenses** and select **Add Expense**.
- 2 Enter the actual date, choose the category, and write a specific description.
- 3 Enter the amount and payment method. Select a teacher when the payment relates to an instructor; add any notes and save.
- 4 Use category and date filters to review spending. Select **Edit** beside an entry to correct it.

Typical categories

Studio rent, instructor/choreographer, costumes, jewelry/props, competition/event fees, advertising, software/subscriptions, music/editing, supplies, travel, and miscellaneous.

Before saving

Check the payment date, amount, and category against the receipt. Keep the receipt in your studio's normal document storage. A teacher selection links the cost to that teacher's record.

10 · STUDIO FINANCES

Record other income

Use this for receipts outside normal student bill payments.

Figure 16. Other Income list with date, category, description, amount, and method.

- 1 Choose **Other Income** → **Add Income**.
- 2 Enter the receipt date and select a category such as Registration Fee, Workshop/Camp, Performance Fee, Costume Income, Private Lesson, or Miscellaneous.
- 3 Enter a clear description, the amount received, payment method, and any notes; save.
- 4 Review entries with date/category filters and use **Edit** when a correction is needed.

Avoid counting a receipt twice

Money paid against a student bill belongs in **Record Payment**. If a workshop or seasonal charge is already on a student bill, record the receipt against that bill; do not also add the same receipt as Other Income.

10 · STUDIO FINANCES

Read the Financial Report

Measure income, expenses, and net profit for a chosen period.

Figure 17. Financial Report with Monthly, Yearly, and All-Time views.

- 1 Open **Financial Report**.
- 2 Choose **Monthly** and a month, **Yearly** and a year, or **All-Time**.
- 3 Read tuition/payments collected, other income, total income, total expenses, and net profit.
- 4 Expand category breakdowns where offered. Use the yearly view to review the monthly trend.

Figure	Meaning
Total income	Tuition payments received, less recorded refunds, plus other income.
Total expenses	Recorded studio expenses for the selected period.
Net profit	Total income minus total expenses.

Cash timing matters

An August bill paid in September contributes to September's collected income. Outstanding bills are not yet cash income. Refunds reduce collected income in the period when the money was returned.

11 · OWNER SETTINGS

Update branding and appearance

The owner can save changes to the studio's presentation.

Figure 18. Settings → Appearance: theme, font size, studio logo, and name.

- 1 Open **Settings** → **Appearance**.
- 2 Choose the preset theme and font size, then select **Save Appearance**.
- 3 Use **Upload Logo** to choose the studio logo. Supported files are PNG, JPEG, WebP, or SVG, up to 5 MB.
- 4 Enter the studio name and select **Save Name**.

Check the saved result

Appearance changes apply across the admin app. The studio's saved branding also contributes to the standard email presentation. Saving these settings requires the owner account.

11 · OWNER SETTINGS

Set discounts and reminder timing

Use decimal fractions when entering discount percentages.

Figure 19. Settings → Billing: discount policy and reminder schedule.

- 1 Open **Settings** → **Billing** as the owner.
- 2 Enter the **Multi-Class Discount** and **Sibling Discount**. For 5%, enter **0.05**; for 10%, enter **0.10**. Choose **Save Discount Policy**.
- 3 Set **Due Day of Month** and **Reminder Days After Due**, then choose **Save Reminder Settings**.
- 4 Review an eligible bill after generation/recalculation to confirm the intended policy is reflected.

Existing bills

Saving a policy does not automatically rewrite every existing bill. Recalculate eligible bills without payments when appropriate. Bills with recorded payments require a deliberate adjustment if a correction is needed.

Reminder timing only results in automatic email sending when the scheduled email service is active and the month's class fees are finalized. To send a WhatsApp message, use Open in WhatsApp and send it yourself.

11 · OWNER SETTINGS

Manage email sending

Use the connection details supplied by your email administrator.

Figure 20. Settings → Integrations. Configured account values are concealed in this guide.

- 1 Open **Settings** → **Integrations** as the owner.
- 2 Enter the supplied SMTP Host, Port, User, Password, and From Address. Use the secure-connection setting specified for that account.
- 3 Select **Save Email Settings**. Leaving the host blank disables email sending.
- 4 A blank password field preserves an already stored password. Enter a replacement only when changing it.

Confirm email sending

Ask the implementation team to verify email sending with an agreed test recipient before relying on parent notices.

Send through WhatsApp

In the family message window, select **Open in WhatsApp**. The wa.me link opens the prepared message. Check the recipient, send the message in WhatsApp, then return to the app and select **Mark as Sent**.

11 · OWNER SETTINGS

Edit email wording

Change the message while retaining the studio's standard email layout.

Figure 21. Settings → Email Templates with template selector, subject, body, and placeholders.

- 1 Open **Settings** → **Email Templates** as the owner.
- 2 Select the message: Registration Received, Enrollment Confirmed, Monthly Fee Notice, or Payment Reminder.
- 3 Edit **Subject** and **Body**. Keep the exact placeholder names and double braces shown under that template, such as **{{parentName}}**.
- 4 Choose **Save Template**. Use **Reset to Default** if you want to restore the standard wording for the selected template.

What changes

The subject and body are editable. The surrounding branded header and footer are fixed. Each template has its own supported placeholders; use the list shown for the selected message.

Read the saved message for tone, spelling, and clear payment instructions. These templates control email wording. Review WhatsApp messages separately in the family message preview before sending.

12 · SPREADSHEETS

Import and export spreadsheets

Use the import template when bringing students into the app.

Figure 22. Students page: Import CSV and Export CSV are available above the roster.

- 1 Open **Students** → **Import CSV**, then **Download CSV Template**.
- 2 Replace the example row with your students. Keep the headings unchanged and save as CSV.
- 3 Choose the file and review the preview/errors. Correct invalid rows before importing.
- 4 Run the import and read the created, skipped, and error results. Check the roster and then add class enrollments separately.

Template heading	What to enter
Student Name	Required student name.
Family Name; Parent/Guardian Name	Household and parent names, especially when creating a new family.
Parent Email; Parent Phone	At least one contact for matching. A new family also needs the required parent/phone details.
Date of Birth; Gender; Status	Use YYYY-MM-DD for dates; readable gender values; Active or Inactive.

Matching and export scope

Import matches families using parent phone/email and skips an existing student with the same name in that family. Conflicts are reported for review. Student export downloads the roster, rather than only the current search/page. Billing export follows the selected month and visible filters. The student export headings differ from the import template; do not re-upload an export unchanged.

13 · HELP

Solve common problems

Check these items before asking for support.

Problem	What to do
I cannot sign in / I am returned to login	Check the website and assigned credentials. Sign in again after an expired session. Ask your administrator to confirm the account is active.
A Save or Create button is disabled	Complete required fields and resolve displayed validation messages. Some settings forms require an actual change before Save becomes available.
A student or family looks duplicated	Compare parent phone/email and family selection. Stop before approving another registration and ask for help resolving conflicting records.
No bills or class-fee rows appear	Check the month. On Billing, clear search and enable all statuses. Generate that month's bills if they do not yet exist.
A paid bill has disappeared from Billing	Enable the PAID status filter; it is hidden by default.
A fee notice is blocked	Review and finalize each named class fee for the billed month, then verify the bill totals and retry.
The bill did not change after a fee edit	The override does not automatically recalculate the bill. Recalculate if there are no payments; otherwise use a justified adjustment.
Recalculate is disabled	The bill already has recorded payments. Preserve that history and use an adjustment for a fee correction.
A parent message did not send	For WhatsApp, open the wa.me link, check the recipient, and press Send in WhatsApp. Check the conversation before retrying. For email, review the result/log and ask for help with email settings if needed.
CSV rows failed or were skipped	Read each result, compare headings with the template, resolve contact matches, and correct only the rows that need attention.
Report totals differ from Billing	Match the period and remember: financial reports use payment/refund dates; Billing groups amounts by the month billed.
The app will not load	Check your connection and refresh once. If it persists, send the page name, time, and exact error to your implementation team.

For support, include the action you attempted, selected month, relevant record name, and a screenshot of the error. Share personal details only through your agreed support channel; never include passwords.

APPENDIX A

Printable operating checklists

Use these during handover and routine studio work.

Daily opening

- ☐ Sign in and review the Dashboard.
- ☐ Check the notification bell.
- ☐ Review pending registration requests.
- ☐ Confirm family matching before approval.
- ☐ Record payments actually received.
- ☐ Follow up failed notices and overdue balances.
- ☐ Sign out when finished.

Monthly close / next month

- ☐ Confirm enrollments and class schedules.
- ☐ Choose the intended billing month.
- ☐ Generate bills and review the result.
- ☐ Check class sessions/rates and overrides.
- ☐ Recalculate eligible affected bills.
- ☐ Review discounts and adjustments.
- ☐ Finalize all reviewed class-fee rows.
- ☐ Send and log family fee notices.
- ☐ Allocate payments across student bills.
- ☐ Review expenses and other income.
- ☐ Reconcile the Financial Report.
- ☐ Export the required roster/billing CSVs.

Handover details

Item	Studio record
Admin website address	_____
Parent registration address	_____
Studio owner / administrator	_____
Implementation support contact	_____
Email sending verified on	_____
Automatic billing / email reminders confirmed	_____
Open in WhatsApp manual sending checked	_____

Account recovery and backups

Keep credentials in your chosen password manager. Agree account recovery, hosting support, and backup arrangements with your implementation team. CSV exports are useful working copies, not a complete system backup.

APPENDIX B

Glossary and status reference

A shared vocabulary for studio administration.

Term	Meaning
Family	The household record grouping parent contacts and students for combined messages and sibling billing.
Student	An individual dancer attached to one family.
Enrollment	A student's participation in a class, with dates and an active/ended status.
Regular class	A class charged by billable session each month.
Seasonal class	A flat-fee program charged once per enrollment; excluded from both discounts.
Class monthly fee	A specific class's sessions/rate/total for one billing month.
Override	A saved change to a class's fee for one month.
Finalized	A class fee whose session count and fee have been reviewed and confirmed for sending notices.
Adjustment	A one-month addition or reduction to a student's bill; not a cash transaction.
Amount paid	Payments received against a bill, reduced by recorded refunds.
Balance	Final amount due minus net paid. A negative figure is a credit.
UNPAID	The bill still requires payment and has no positive net payment covering it.
PARTIAL	Some money has been received and a positive balance remains.
PAID	The balance is zero.
OVERPAID	The bill has a credit balance because net paid exceeds the amount due.
Pending / Processed / Rejected	Registration review states: awaiting review, completed processing, or declined.
Net profit	Collected income plus other income, minus studio expenses, for the selected period.

Edition notes

This manual describes the app reviewed on 08 September 2026. Screenshots show the current studio demonstration records and some empty starting screens. Amounts in worked examples are illustrative. Configured email account values are concealed. Email sending should be checked at handover.
